INTRODUCTION

- A specialized software for managing bookstore operations both online and in-store
- Designed for Pustaka Ilmiah, a medium-sized academic bookstore.
- Replaces manual tracking and sales processing with a centralized digital system
- Manages inventory, book purchases, transaction verification, and reporting
- Supports business growth by increasing accuracy, reducing errors, and enhancing customer experience

PROBLEM STATEMENT

- Uses manual processes (spreadsheets, emails) for stock and order management
- Experiences frequent stock mismatches and delays in order handling
- High staff workload due to repetitive and manual checking
- Lack of transaction tracking causes customer confusion
- These issues reduce customer satisfaction and limit future business scalability

OBJECTIVES

- To develop a multi-user book inventory and sales system that allows customers, staff, and admins to interact with the platform based on their specific roles and permissions
- To streamline the book purchasing and transaction process by enabling real-time order tracking, and transaction verification
- To improve bookstore operational efficiency by providing tools for staff management, inventory control, and sales reporting for better business decision-making

VALUE PROPOSITION

For academic bookstores like Pustaka Ilmiah

- **Our system (BISS) offers a complete platform to manage book sales, inventory, and staff in real-time– unlike manual methods that are prone to error and inefficiency. BISS improves customer satisfaction, streamlines staff workflow, and generates real-time sales insights, making bookstore operations smarter and scalable.**

MARKETING

Target Users

- Small to medium academic bookstores
- Students, educators, and knowledge-seeking customers
- Store owners looking to digitize operations

Promotion Channels:

- Social media (Instagram, Facebook, TikTok)
- Academic networks and campus bookstores
- Digital posters, flyers, and email marketing

EXIT STRATEGIES

1. System Handover to Pustaka Ilmiah

- **Deliver full documentation, source code, and user guide**
- **Train staff/admin on system usage**

2. Open Source or Academic Submission

- **Publish the project for educational use or further development**
- **Useful for showcasing skills in portfolio or final-year project**

3. System Upgrade or Replacement

- **Plan for future upgrades or migration to a more advanced system**
- **Archive data before system retirement**
